EXPERIENCE

Software Development Engineer II (SDE-2) **Jan 2026 – Present**
Surepass Technologies Pvt. Ltd *Delhi, India*

- **SureParser:** designed, built, and run solo, the company's LLM document-processing platform — a multi-service backend (API service, Temporal workers, S3 storage, Postgres) with automatic schema generation, document classification, splitting, and structured extraction on PDFs and images, exposed as sync and async APIs.
- Built the customer workflow engine that chains document operations (split, extract, translate, conditional routing, merge, external APIs, human review) into custom pipelines with **parallel execution** and guaranteed completion callbacks.
- Built the billing and trust layer: usage-based metered billing with signed callbacks, migrated on live traffic with **zero** client breakage, plus org-level multi-tenant isolation and hardened ingestion (SSRF guards, size caps).
- Cut LLM response latency **40%** and token spend ~**30%** via prompt restructuring and response caching, while leading a junior frontend engineer and owning Console, the multi-tenant platform fronting the product suite.

Software Development Engineer I (SDE-1) **Jan 2025 – Dec 2025**
Surepass Technologies Pvt. Ltd *Delhi, India*

- Extended SureSign, the e-signature platform (Python & Java), adding PFX certificate-based signing, face-match verification and geo-fencing for signers, and a PDF utility suite serving heavy daily traffic.
- Built verification APIs spanning identity, land-record, and credit/document checks, consolidating **multiple** upstream providers behind single normalized endpoints with circuit breakers and retry logic.
- Worked on the SureReach backend with **zero** critical production incidents, and built an internal PDF RAG tool for cross-document Q&A with semantic retrieval and LLM-generated answers.

Software Developer Intern (Python) **Oct 2024 – Dec 2024**
Surepass Technologies Pvt. Ltd *Delhi, India*

- Worked on the SureReach backend, building web-scraping and data-extraction pipelines that gather and verify business-contact data at scale in production.

PROJECTS

GatherHub – Event Discovery Platform / *TypeScript, Prisma, PostgreSQL, Zod* **Live-Link**

- Built REST APIs for event creation, browsing, and registration with JWT-based 3-tier role access and end-to-end request validation with Zod, backed by a Prisma + PostgreSQL data layer.

EchoInk – Serverless Blogging Platform / *Cloudflare Workers, Hono.js, Prisma* **Live-Link**

- Built on Cloudflare Workers with Prisma ORM on PostgreSQL using Accelerate connection pooling at the edge, a React + Vite frontend, full auth and CRUD, and a shared Zod validation schema published as an npm package.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript

Backend & Frameworks: FastAPI, Flask, Node.js, Express.js, Next.js, Prisma, WebSocket, Detox

AI / LLM: production LLM pipelines, prompt design, RAG, cost & latency tuning

Databases: PostgreSQL, MongoDB, Redis

Infra & Tools: Docker, Temporal, Celery, CI/CD, Git, Zod

EDUCATION

Jagannath University India **2019 – 2023**
B.Tech in Computer Science Engineering *CGPA 8/10*
